Art Unit: 3727

***Reasons for Allowance***

The prior art of record fails to disclose or provide proper motivation for creating an accessory for a hand-pushed vehicle that is attached to the handles of the vehicle and is at the same time supported on the ground by wheels that are attached to a rigid floor attached to the bottom surface of the accessory.

Mendon (US 5,794,957) teaches an accessory that is attached behind a wheelchair and is at the same time supported on the ground by wheels, however, Mendon does not teach the accessory being attached to the handles of the wheelchair, thus extending vertically between the handles of the wheelchair and the ground. Mendon also fails to teach the accessory having walls of flexible material.

Wells (US 4,577,903) teaches an accessory that is attached behind a wheelchair and is made of flexible material, the accessory being attached to the handles of the wheel chair, the handles thus supporting a portion of the accessory's weight. Wells does not teach or provide motivation for attaching a rigid floor support with wheels to the bottom of the accessory and further extending the accessory low enough so as to come into contact with ground at the same time it is attached to the handles of the wheelchair.
